Integrating Coding and Maths in K-12: Research and Practice

Mr Daniel Hickmott

Ph.D Candidate, School of Education, University of Newcastle

newcastle.edu.au/cs4s

Talk Overview

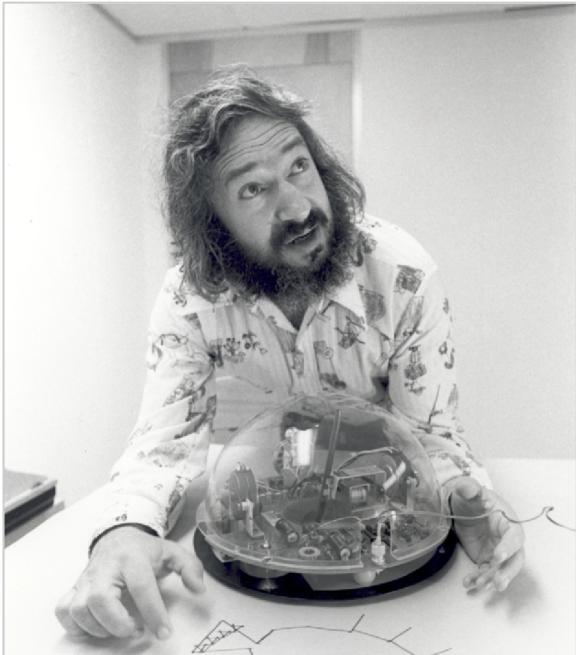

- *Coding, Computational Thinking (CT) and Learning Maths*
- 3 Projects from UON that involved *Coding, CT & Learning Maths*
 - A Scoping Review of *Computational Thinking* in K-12 Maths Education
 - *ScratchMaths* Pilot
 - *CS4HS Networks* workshop
- Our Experiences and Lessons Learned

*“Here’s the big idea. **Maths is difficult** in part because of the **language** in which it is expressed. Can we find a different language – and set of ideas and approaches - that is more open, more accessible and more learnable. And can we find it without sacrificing what makes mathematics work? Our tentative answer is ‘yes’ – **the language of programming** might be just such a language”*

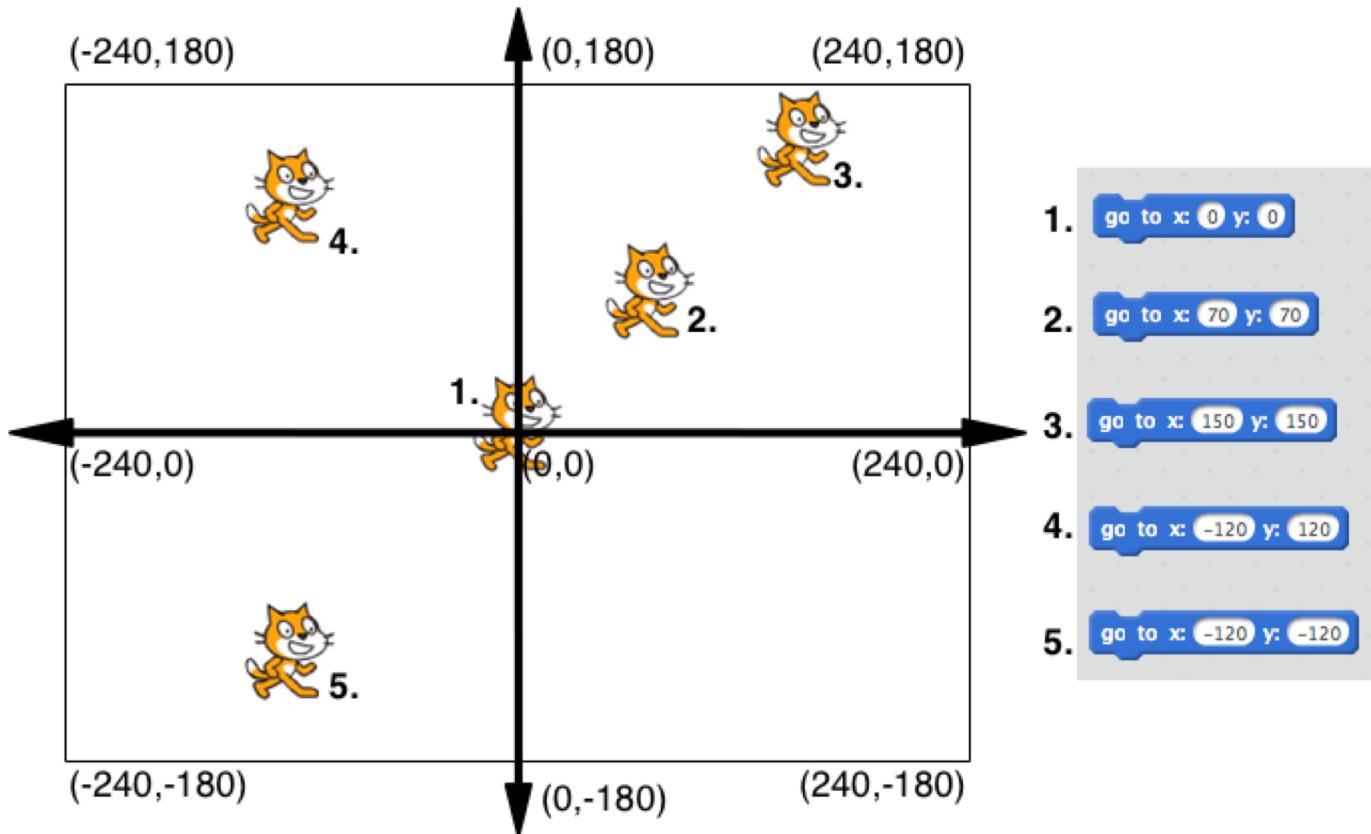

What’s the problem?

UCL ScratchMaths Homepage: <http://www.ucl.ac.uk/ioe/research/projects/scratchmaths>

Coding, CT and Learning Maths

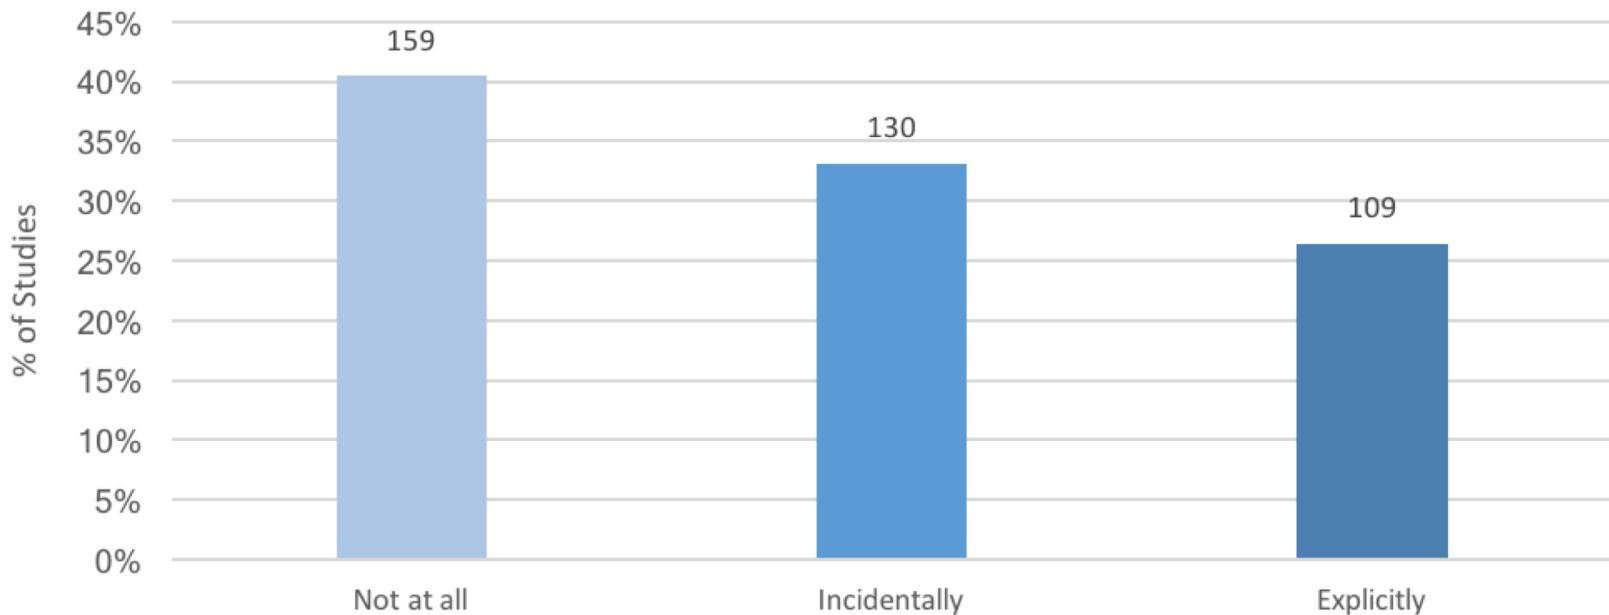

- Examples of combining Maths and *Coding*:
 - *Logo*
 - *Boxer*
 - *Bootstrap*
- Researchers have found that *Coding* can help concretise abstract Maths concepts that learners struggle with (Kafai 1998, Papert 1980)

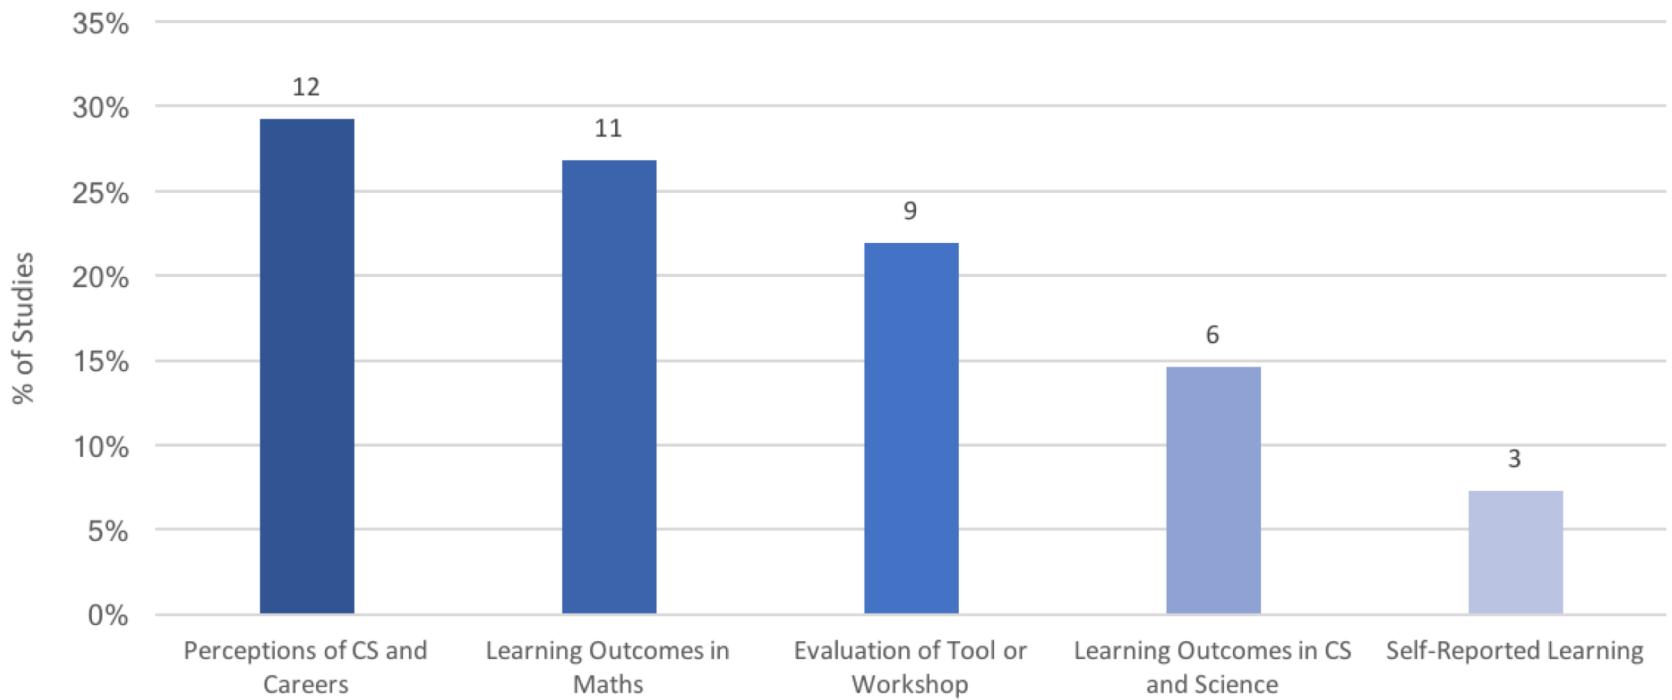

Projects: Scoping Review

- We conducted a scoping review of literature on *Computational Thinking (CT)* in K-12 Education from 2006 to 2016
 - 393 papers in total, after removing duplications and irrelevant studies
- Classified how *CT* and learning of Maths were linked in the studies:
 - *Not at all*
 - *Incidentally*
 - *Explicitly*
- Also classified the type of study and the outcomes measured

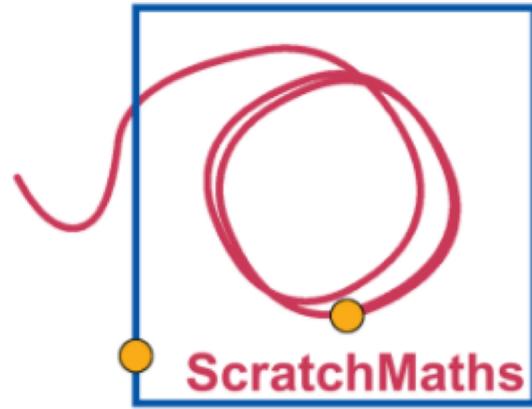

Studies Linked to the Learning of Mathematics

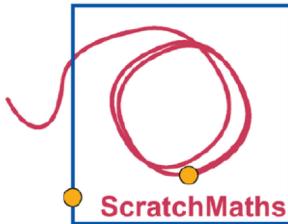

Type of Evidence in Empirical Studies

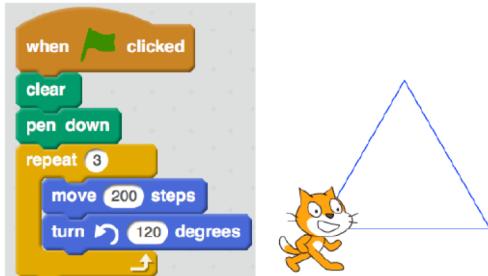

ScratchMaths

What is *ScratchMaths*?

- The development of materials that teach *Coding* and Maths at Year 5/6
- An evaluation (*Randomised Control Trial*) of the curriculum materials and their effects on students' Maths and *Coding* ability in 100+ English schools

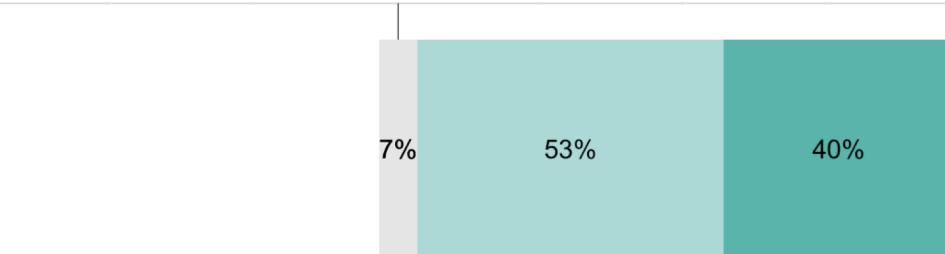

ScratchMaths in Australia

- Dr Elena Prieto (University Of Newcastle) and Prof Kathryn Holmes (Western Sydney University) want to bring *ScratchMaths* to Australia.
- But first, they need to know how the *ScratchMaths* materials can be adapted for the Australian context
- Conducting a pilot research project involving Professional Development (PD), surveys and interviews to find out

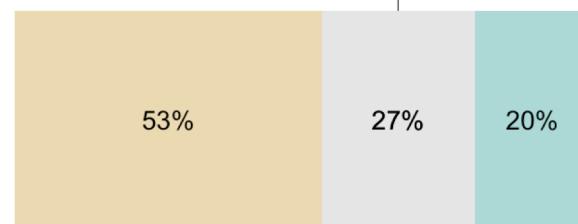

ScratchMaths in Australia

- We ran two day PD workshops for 13 teachers at:
 - University of Newcastle
 - Western Sydney University
- Day 1: *Computational Thinking*, Scratch and Teacher Accounts
- Day 2: *ScratchMaths* Module 1: Tiling Patterns (Geometry)
- Post-workshop: implementation in Stage 3 classes

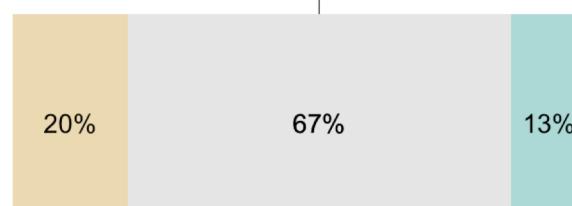

I know how to teach mathematics concepts effectively

I know how to teach programming concepts effectively

I can guide students in using programming as a tool while we explore other topics

100 50 0 50 100

Percentage

Response Strongly disagree Disagree Neither agree nor disagree Agree Strongly agree

I appreciate the value of teaching mathematics and programming in an integrated manner

40% 33% 27%

I can create original lesson plans which incorporate programming as an instructional tool

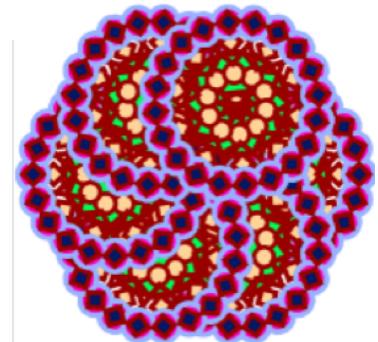

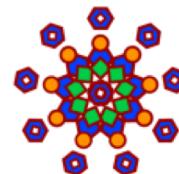

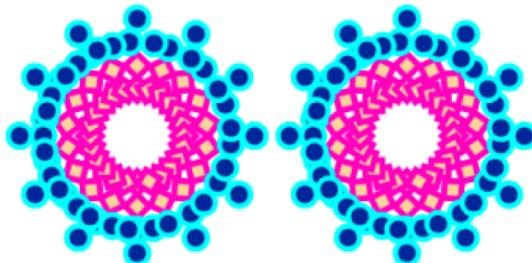

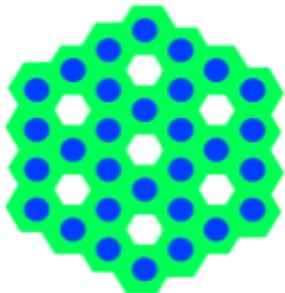

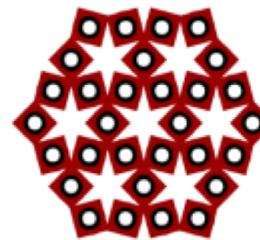

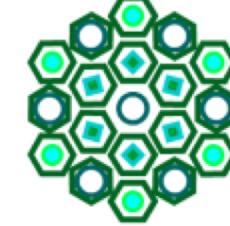

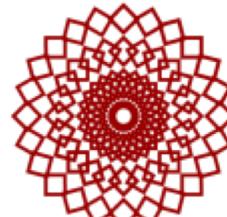

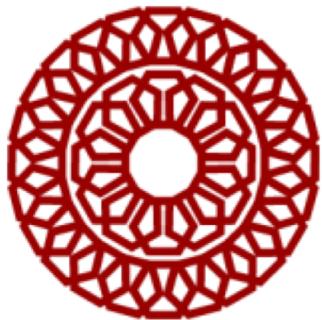

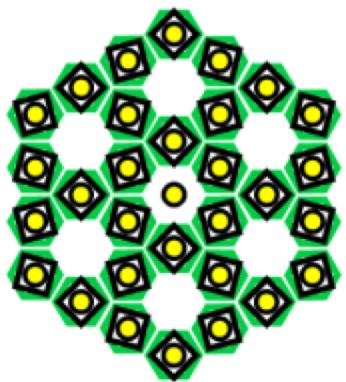

40% 33% 27%

I can adapt lesson plans to incorporate programming as an instructional tool

33% 40% 27%

Response Strongly disagree Disagree Neither agree nor disagree Agree Strongly agree

"I absolutely loved ScratchMaths, it was so fun learning all about coding and was something i looked forward to every Monday. I enjoy having to find the problem when it goes wrong and then making the code much better. I find it really cool that you can program a computer to do something like turning a certain amount of degrees or moving a certain amount of steps. ScratchMaths was difficult at first but once I learnt the basics all i wanted to do is learn more. Computer Science is great fun and is perhaps my favourite thing at school each week. I learnt that if the repeat block is 6 then the degrees will have to be 60 because 6×60 is 360 and it has to equal 360 degrees if you want a full pattern. I liked it alot because its a whole new aspect of learning that none of us had tried before."

From a Stage 3 student in one of the *ScratchMaths* Teacher's classes

Google CS[4]HS

CS4HS Networks

CS4HS Networks

- In NSW, *Networks* (Graph Theory) will be added to the Mathematics Standard syllabus at Stage 6 from 2018
- We ran a CS4HS workshop that combined the teaching of *Networks* and *Coding* with:
 - An *unplugged* approach, using materials adapted from *CSUnplugged's Muddy City* resource
 - And a “*plugged*” approach, using the *Edgy* program (a modification of *Snap! Build Your Own Blocks*)

MST Base Project

Graph draggable

Scripts **Costumes** **Sounds**

```

when k key pressed
  new graph
  build muddy city
    set sorted edges to edges all the edges sorted by label ascending
    for each edge of sorted edges
      set color of edge edge to red
      if is subgraph of red edges cyclic
        set color of edge edge to green
  
```

Variables

- visited
- current node
- probability
- number of nodes
- i
- j
- new edge
- to visit
- parent
- sorted edges
- candidate edges
- mst nodes
- shortest candidate edge

Graph

Stage

The graph on the right shows 10 nodes (A-J) connected by weighted edges. The edges and their weights are: A-B (4), A-D (3), B-C (2), B-E (2), B-D (5), C-E (2), E-H (3), E-J (5), H-G (4), G-I (5), I-J (4), J-E (5), J-G (9), G-F (3), F-D (4), D-A (3), D-B (2), B-F (9), F-C (2), C-J (4), J-E (5). The edges colored red are: A-B, A-D, B-C, B-E, B-D, C-E, E-H, E-J, H-G, G-I, I-J, J-E, J-G, F-D, D-A, D-B, B-F. The edges colored green are: C-J, J-E, E-H, H-G, G-F, F-C.

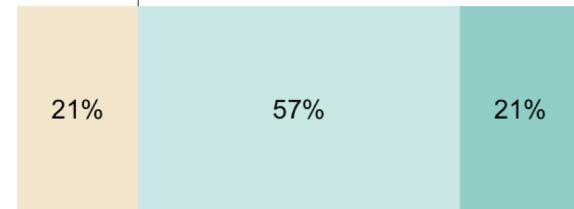

CS4HS Networks

- 15 teachers participated in the 2 day workshop
 - The majority were Maths teachers, the rest taught Science and/or Technologies
- We asked for feedback from teachers at the end of the workshop
- I am interested in developing these materials more
 - The materials are currently available at: cs4s.github.io/math-2017

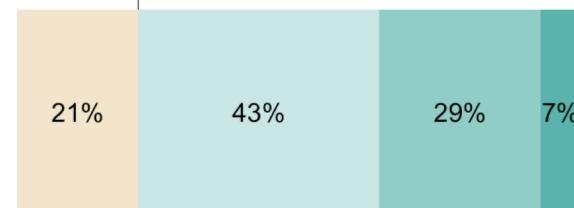

I have the curriculum, tools & resources I need to integrate Mathematics and Coding effectively

I have the knowledge & skills I need to integrate Mathematics & Coding effectively

I am confident in my ability to integrate Mathematics & Coding in my teaching

Response

Very Strongly Disagree

Strongly Disagree

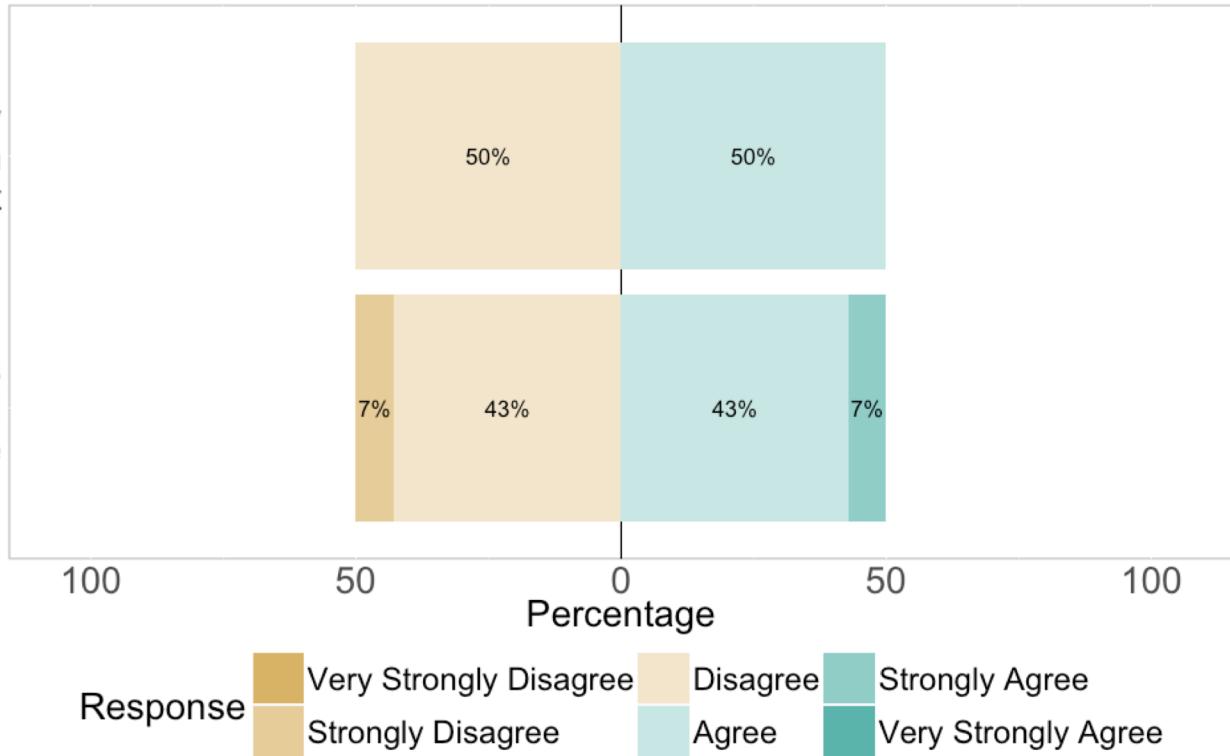

Disagree

Agree

Strongly Agree

Very Strongly Agree

I know how to create quality Mathematics and Coding curriculum integration content

Our Experiences and Lessons Learned

Our Experiences and Lessons Learned

- We have observed that our challenges running professional development are similar to the ones teachers face in their classes:
 - Preparation time for resources
 - Differentiating for learners with varying CS knowledge
 - Balancing direct instruction with self-directed learning - the “*play paradox*” (Noss & Hoyles, 1996)
 - Sometimes the lab computers or websites we use do not work

Our Experiences and Lessons Learned

- From preliminary analysis and reflection on our experiences:
 - There are many opportunities for integrating *Coding*, *CT* and Maths
 - Teachers see the value of integrating *Coding* into different KLAs
 - Teachers need time and practice to learn *Coding*
 - There is a need for both:
 - Larger-scale studies that evaluate materials/approaches that teach *Coding* and Maths (like *ScratchMaths* in England)
 - Studies that take an in-depth look at how teachers learn *Coding* and how they integrate it across different KLAs (like my planned Ph.D project)

Questions?
